

Using Adobe CS3 Updates with The Casper Suite

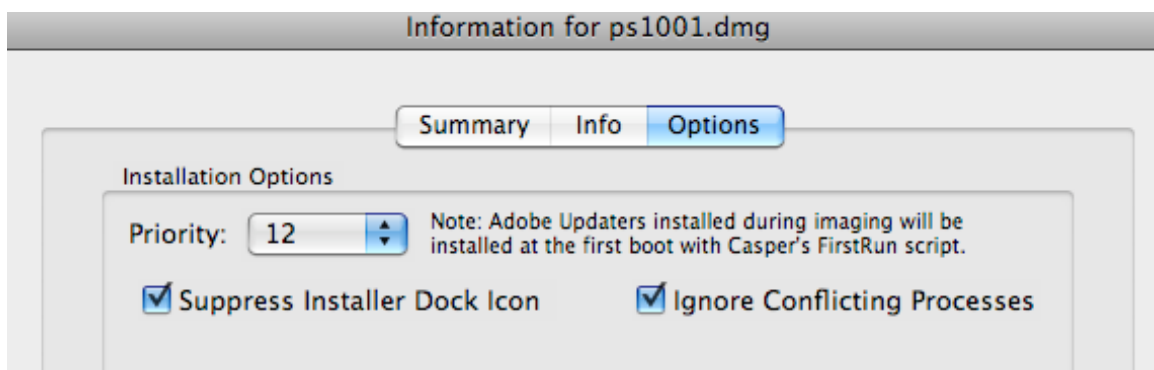

This document will describe how to import an Adobe CS3 application update into Casper Admin and create a deployable object

Adding the update to Casper Admin:

1. Download the update disk image from <http://www.adobe.com/downloads/updates/>.
2. Drag the update .dmg into Casper Admin.
3. Double-Click on the .dmg in Casper Admin, this will bring up the Information window.
4. Click on the Info tab and change the display name to a logical format so you can easily locate the update in your package repository.
5. In the info tab, check the box labeled "This file is a disk image of an Adobe Installer DVD or and Adobe Updater".

6. Casper Admin will scan the .dmg to verify it contains the components necessary for an Adobe Update.
7. Click on the Options tab, select the desired priority and install options. Be sure to set this update as a lower priority than your actual application deployment, to ensure this is installed after the application.

8. Click OK to close the update's Information window.
9. The updater will now be displayed in your package repository with the format of "Adobe Updater" and can be deployed with Casper Remote or via policy.

View Type		Groups				
All		All Groups				
Packages		Adobe Updates				
Scripts		Test				
Printers		Unknown				
Dock Items						
Adobe Installer Images						

Name	Format	Group	FUT	FEU	Index
Photoshop 10.0.1 Update	Adobe Updater	Unknown	No	No	No

Tips for deploying Adobe CS3 Updates:

1. Log into your JAMF Software Server (JSS)
2. Click on the Management tab, and choose Smart Computer Groups
3. Create a new Smart Computer Group
4. Name your new group, and click the "+" next to Software Info
5. Click Application Title and enter the application name.
6. Click the "+" in the Software Info section again and this time choose Application Version
7. Enter the version of the application that needs to be updated. (It is highly recommended that you perform an inventory search to find the exact version.)

Software Info					
	Application Title	has	Photoshop CS3	-	+
and	Application Version	is	10.0 (10.0x20070321 [200	-	+

8. Save your Group.

You can now deploy the update either via policy with a scope containing this Smart Group, or with Casper Remote – simply selecting the entire group from the Computers tab:

Assign this Policy to these Computers

Assign to All Computers

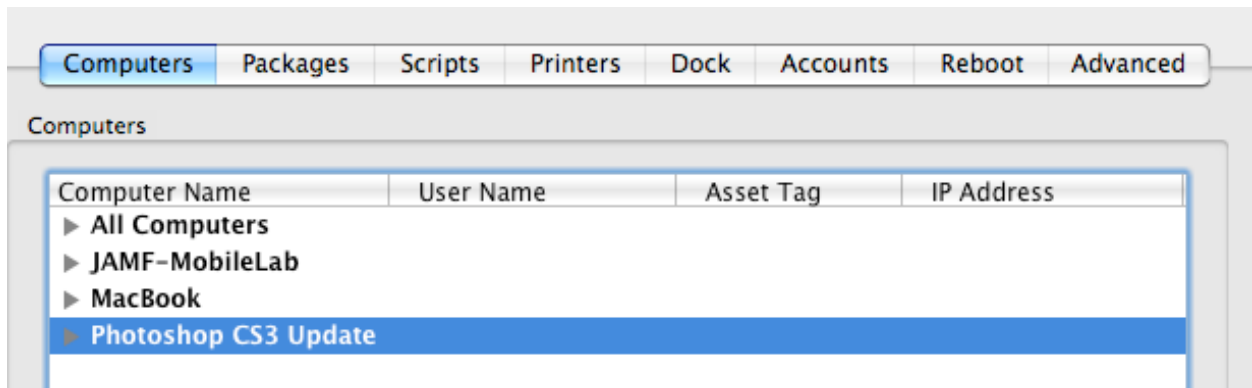

Assign to Specific Computers

[Add Computer Groups](#) | [Add Individual Computers](#) | [Add Departments](#) | [Add Buildings](#)
